

# Ojima\_6chome\_car\_link

2020 / Ojima 6-chome, Koto-ku

## Overview

Data listing the links passed.

## License

Use is permitted only for the 2026 Summer Course on Behavior Modeling in Transportation Networks.

## Data Column Specification

| Column Name | Data Type | Description                                                                                                                                                                                                                                                                                                                      |
|-------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MonitorID   | Int64     | Identifier for the individual.                                                                                                                                                                                                                                                                                                   |
| DiaryID     | Int64     | Identifier for the trip date.                                                                                                                                                                                                                                                                                                    |
| TripID      | Int64     | Identifier for the trip.                                                                                                                                                                                                                                                                                                         |
| Mode        | Int64     | Transportation mode code. Values: 100=Rail, 101=Subway, 103=Monorail, 200=Tram, 201=Bus, 300=Car, 301=Freight car, 302=Taxi, 303=Motorcycle, 400=Bicycle, 401=Shared bicycle, 402=Velotaxi, 500=Walk, 600=Airplane, 601=Ship, 602=Other, 999=Unknown.                                                                            |
| Purpose     | Int64     | Trip purpose code. Values: 0=Not assigned in this route dataset, 100=Commuting or schooling, 200=Business, 201=Returning to workplace or school, 300=Returning home, 400=Shopping, 401=Dining, 402=Lessons, 403=Hospital visit, 404=Leisure, 405=Sightseeing, 406=Strolling, 407=Escorting, 500=Waiting, 501=Other, 999=Unknown. |
| LinkID      | Int64     | Unique identifier of the traversed link; corresponds to the link ID in the relevant network dataset.                                                                                                                                                                                                                             |

| Column Name    | Data Type | Description                                                  |
|----------------|-----------|--------------------------------------------------------------|
| Link_Dep_Time  | String    | Link departure time in Japan Standard Time (JST, UTC+09:00). |
| Travel_Time(s) | Float64   | Travel time in seconds.                                      |
| Speed(km/h)    | Float64   | Average speed in kilometers per hour.                        |
| Link_Cost      | Int64     | Cost of traveling along the link.                            |
| Link_Length(m) | Float64   | Length of the link in meters.                                |

---

### Hash Value (BLAKE3)

ca582231390da659f20a2d9ed70d8c96ebb54adfe771db28caa5257b24442c48
